

Downside risk for Nifty seen at 17457 and then at 17251.

The gyan mantra is to stay light on aggressive leveraged long positions.

Good Morning & Welcome to Monday's trading action at Dalal Street dated 20th of September 2021.

SGX Nifty is indicating a rocky session for our stock markets.

The negative catalyst: Bears seen waking up across global stock markets.

That brings us to our call of the day which suggests negative global cues likely to hamstring the bullish sentiments of the mightily Nifty. Technically speaking, bears are likely to be in driver's seat only below 17251 mark. Focus from here on shifts to FOMC to trickle on 22nd September

Outlook for Monday: Bears finally have a chance...

Equity markets likely to remain nervous as keeping investors at the edge and bit nervous will be Fed's meeting slated on September 22nd. The September meeting would be the opportunity for the US central bank to outline the timeline for the reduction of its \$120bn a month bond buying program. All anxious eyes if the taper will be in December, or possibly later.

Morning KSL

The Fed interest rate decision, well the commentary, might provide some volatility.

Bears finally have a chance but with the wall of money from Central Banks and buybacks, it will not be easy so we remain bullish on any inter-week dips

Amidst this backdrop, Dalal Street is poised for a cautious trading session. The gyan mantra for perma-bulls is to trade highly selectively.

WHAT TECHNICAL TELLS US ON NIFTY/SENSEX:

The technical landscape of Nifty is suggesting extremely overbought conditions.

The positive catalysts:

- # Signs of pick-up in economic activity are visible amidst waning of the second wave of the pandemic and lockdown restrictions being eased. Also, with normal monsoon on cards, agriculture sector is likely to remain buoyant and most importantly, the economy is likely to witness robust rebound on backdrop of fiscal stimulus packages by central banks across globe. The vaccination efforts gathering momentum also acts as positive catalyst.
- # Q1FY22 revenue grew 38.0% YoY and net-profit jumped nearly four-fold to Rs 1,174 crores on backdrop of solid order book coupled with large project executions and robust E&C growth amidst pandemic.
- # International orders were 20% of the total order book of Rs 323721 crore as on June 30, 2021. Order inflow at Rs. 266bn (+13% YoY), bagged orders worth Rs. 26,557cr in Q1FY22.
- # EBITDA margin expanded 320bps YoY to 10.8% on operational efficiencies. EBITDA rose 95.7% YoY, while PAT increased 825.8% YoY
- # Average execution cycle is 27 months. During the quarter, orders were received in various segments like Metros, Rural Water Supply, Minerals and Metal, Residential, Power Transmission and Distribution, Power and Hydrocarbon Offshore sectors.
- # The sustained high oil prices are expected to boost the investment momentum in GCC nations.
- # High liquidity, improved leverage, prospective pipeline with better utilization and production is expected to continue in the near-term.

Technically, brace yourselves for a major breakout play from a classic 'Flag pattern' breakout on the weekly charts. An impulse uptrend is seen forming on the daily time scale, with positive SAR series, with recent sequence of higher high/low intact on all time frames.

Add to that a bullish divergence and a rising stochastic signal (on weekly charts) with recent increase in volumes signaling a larger rebound. The 200 days Exponential Moving Average (EMA) of the stock on the daily chart is currently at 1451 zone. The level of Rs 1451-1475 zone will act as a strong support zone and any corrective declines to these levels should be used as an opportunity to initiate aggressive long positions.

A potential entrance exists at CMP, and on dips between 1660-1675 zone, targeting psychological 1800 mark and then aggressive targets at psychological 2000 mark. Stops below 1561. Holding Period: 3-5 Months.

PP: Pivot Point : This is trigger point for weekly buy/sell based on the price range of the previous week.
R1: Resistance one : 1st Resistance over PP. R2 : Resistance two : 2nd Resistance over R1.
S1: Support one : 1st support after PP. S2 : Support Two : 2nd support after S1.

As per the tool, the trader should take BUY position just above PP and keep the stop loss of PP and the first target would be R1. If R1 is crossed then R2 becomes the next target with the stop loss at R1.

Similarly if price goes below PP the trader should SELL and keep the PP as Stop loss and the first target would be S1.

If S1 is crossed then S2 becomes the next target with the stop loss at S1.

This is a trading tool. The key to use of this tool is the use of STOP LOSS.
